MEASURING YOUR DOG:

A: BACK LENGTH: Make sure dog is **standing STRAIGHT** when you do this - not sitting down, not wriggling around, etc. Place one hand under your dog's chin and raise his head. Run your other hand along the flat part of his back towards the neck, until you come to the angle where your hand has to travel UP his neck. Measure from this point along his back to the end of the body allowing clearance for the tail. This is the BACK LENGTH measurement.

B. NECK CIRCUMFERENCE: **Do NOT measure from the collar** as this will give a wrong measurement.

C. CHEST: Measure AROUND the body just behind the dog's front legs.

***If the measurements are between sizes, or your pet has a stout build, deep chest, or is overweight, going up one size is recommended.
